¹ Winter Pack Mid-Europe: comprises insulation (floor and bund) and heater for ancillary area.

CEMO CUBE – a new generation. Redefining the Standard³.

The majority of fuel stations have been adapted from oil storage tanks and often give the appearance of being cobbled together as best as possible. Perhaps now is the time to redesign from scratch and produce a purpose

designed fuel station more closely suited to today's user. CEMO present the latest in security, function and design in the CUBE. We have introduced features with benefits, not compromises and jigs. The first dispensing station to be

designed as a dispensing station, whether for diesel, AdBlue® or lubricants, with everything in its place, easily accessible and straightforward to use. It's impressive – a great concept. Take a look and see if you agree.

The clever solution for easy handling.

2" dry coupling, 230v electric membrane pump 35 I/min and automatic nozzle for AdBlue®

digital handheld flow meter for lubricants

Lube CUBE 1000

The One Dispensing Station that Has it All

Always tidy

The automatic hose reel helps you keep 8 m of hose in order.

✓ Sensible layout

Integrated nozzle holder keeps things in place.

✓ Ergonomic

All equipment is positioned so that it is easy to see and access at an optimum level over the bund.

✓ Double protection

Integral 110% bund gives added environmental protection.

sensible layout

✓ Transport-friendly

Integral forklift runners assist with loading and installation. Optimal dimensions based around Europallet measurements for ease of transport and delivery to site.

✓ Robust, lockable lid

Lockable lid secured by toggle latches. Opens upwards on supporting gas struts to allow access from three sides and plenty of light to see what you're doing.

✓ Designed-in stability

Two systems ensure stability – moulded hexagonal matrix for integral polymer strength, supported by twin steel bands at the points of greatest load. Reduces movement and increases service life.

✓ Independently tested

Ü-mark shows compliance with German building standards that insist on a minimum 25-year service life, full load bearing capacity and 30 minutes fire resistance. CE-mark shows compliance with BS EN 13341:2005+A1:2011 standard for aboveground polyethylene oil tanks.
